

anti-human CD98

The antibody MEM-108 reacts with CD98, a 125 kDa disulfide-linked heterodimer (80 kDa glycosylated heavy chain + 45 kDa non-glycosylated light chain). CD98 is expressed on T lymphocytes (upon activation) and activated NK cells; it is also present at low levels on B lymphocytes, NK cells, monocytes and platelets.

CD98 (4F2) is a type II transmembrane glycoprotein which serves as the heavy chain of the heterodimeric amino acid transporters (HATs). CD98, linked to various light chains by disulfide bond, is responsible for cell surface expression and basolateral localization of this transporter complex in polarized epithelial cells and also interacts with $\beta 1$ integrins and increases their affinity for ligand. Besides its roles in amino acid transport, CD98 is thus involved in cell fusion and activation. It is implicated in regulation of cellular differentiation, growth and apoptosis.

|-----------------------------|---|
| Clone: | MEM-108 |
| Isotype: | Mouse IgG1 |
| Physical state: | Purified from ascites by protein-A affinity chromatography |
| Purity: | > 95% (by SDS-PAGE) |
| Buffer: | PBS with 15 mM sodium azide (pH 7.4) |
| Storage Instruction: | Store at 4 °C. For long-term storage aliquot and store at -20°C. Avoid freeze/thaw cycles. |
| Application: | Flow Cytometry, Immunoprecipitation |
| Reference: | Cho JY and others: 2003 May 15;286(1):1-11. Cai S and others: 2005 Mar 1;118(Pt 5):889-99. Dalton P and others: 2007 Mar;1768(3):401-10 |
| Quantity: | 0.1 mg |
| Order N°: | H12212 |

Warning: Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink and animal feeding stuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32).
